(57) Abstract:

PROBLEM TO BE SOLVED: To obtain a cosmetic having high water resistance and durability of makeup, high uniformity of a cosmetic film, excellent stability with time and smooth and good touch by making the cosmetic include powder treated with a compound containing a specific perfluoropolyether group and a silicone resin.

SOLUTION: This cosmetic comprises (A) 2-95 wt.% of powder (e.g. titanium oxide, red iron oxide,

etc.), subjected to surface treatment with 0.1-50 wt.% of a compound containing a perfluoropolyether group having ≈ 300 molecular weight, selected from a perfluoropolyether alkyl phosphate, its salt, a perfluoropolyether alkyl sulfate, its salt, a perfluoropolyether alkyl carboxylate and its salt and (B) 0.5-50 wt.% of silicone resin solid or semisolid at a normal temperature (e.g. trimethylsiloxysilicic acid resin). The cosmetic has improved stability, etc., by including an amphiphilic silicone compound.
